

BrandPedia Kids - 比赛交付物制作包 / Competition Deliverables Pack

商业计划书、路演视频、答辩与决赛 PPT 准备清单

Document Purpose

- Structured templates for competition submission and defense.

Prepared for Grade 11/12 IAI²O AI for Business project coaching. Source-aligned with the uploaded BrandPedia Kids product proposal.

1. Required Deliverables / 必须交付物

Deliverable	Content	Key Standard
Business Plan / 商业计划书	Problem, solution, user, AI technology, product demo, market, business model, risks, roadmap.	Align the product with AI for Business, not just education technology.
Pitch Video / 项目路演视频	2-3 minute story-driven video with screen recording and concise narration.	Show product in action; do not over-explain code.
Final PPT if Shortlisted / 入围后决选 PPT	Executive-level deck for onsite defense.	Prepare structure early even before shortlist.

2. Business Plan Structure / 商业计划书结构

Section	Expected Content
1. Executive Summary	One paragraph: BrandPedia Kids is an AI-powered children’ s business encyclopedia that converts familiar brands into interactive learning experiences.
2. Problem	Children recognize brands but do not understand pricing, marketing, revenue, competition, or supply-chain logic; parents and schools need engaging business literacy content.
3. Solution	Logo wall, podcast + card flow, custom brand AI generation, quiz and recommendations.
4. Users	6-14 children, parents, K12 education institutions, brands seeking youth education outreach.
5. AI and Technology	LLM scripts, TTS podcasts, illustration prompts, JSON schema, cache, factual review, Next.js product demo.
6. Business Model	Freemium consumer model, B2B course/content licensing, brand-cooperation modules.
7. Competitive Advantage	Clear age group, scalable AI content generation, business education angle, safe media strategy.
8. Risks and Responses	TTS speed, AI accuracy, image copyright, generation cost; respond with pre-generation, knowledge review, AI illustrations, cache.
9. Roadmap	MVP -> content expansion -> productization -> commercialization.
10. Team and Execution	Two-student role split, teacher-guided workflow, testing and deployment evidence.

3. Pitch Video Script Skeleton / 路演视频脚本骨架

Time	Narration Purpose	Visual
0:00-0:15	Hook: A child knows Starbucks or Disney, but does not know why the business works.	Show familiar brand cards.
0:15-0:35	Problem and users: business literacy is abstract; children	User persona and problem text.

	need stories and interaction.	
0:35-1:25	Product demo: logo wall, brand page, podcast, cards, quiz.	Screen recording.
1:25-1:55	AI workflow: input brand -> structured content -> TTS/audio -> cards -> cache/review.	Pipeline diagram.
1:55-2:25	Business model and scale: freemium, B2B content, brand partnerships.	Simple business model chart.
2:25-2:50	Risk controls and roadmap.	Risk table and roadmap.
2:50-3:00	Closing: AI makes business education accessible and scalable for children.	Team and product logo.

4. Judge Q&A Bank / 评委问答库

Question	Strong Answer
Why is this AI for Business?	Because AI is used to scale personalized brand-learning content, while the product teaches business models, marketing, competition, and monetization.
Why children aged 6-14?	They already encounter brands daily, but current business education is too abstract. Familiar brands lower the learning barrier.
How do you prevent hallucination?	Use structured prompts, source-to-check fields, manual review, cautious wording, and cached approved content.
How do you handle copyright?	Use non-official placeholder icons and AI-generated educational illustrations; avoid official logos and protected characters in generated media.
Why would users pay?	Parents and institutions pay for structured, safe, engaging business literacy content; brands may pay for educational partnership modules.
What is the MVP?	Logo wall, five full brand pages, podcast player, card flow, custom brand AI-generation entry, and stable demo path.
What if TTS is slow?	Pre-generate preset-brand audio and show cached results for custom brands during demo; text script remains available.
What is the biggest risk?	Content accuracy and demo stability. Both are controlled through review, cache, mock fallback, and backup demo assets.

5. Final PPT Outline / 决赛 PPT 框架

Slide	Content
1	Title + one-line value proposition
2	Problem: children know brands but not business logic
3	Target users and scenarios

4	Product demo flow
5	AI generation pipeline
6	Technology architecture
7	Business model
8	Market and education value
9	Risks and mitigations
10	Roadmap and team execution
11	Ask / closing statement
